Abstract (en)

A washing or drying system comprises a washing or drying appliance having an electronic control unit and in which laundry items are loaded. The system further comprises a radio frequency identification device (4,5) associated with the appliance (1) and able to capture automatically data stored on a remotely accessible data media (6) associated with each item of laundry, such radio frequency identification device being part of or connected to the control unit of the appliance and being suitable to adjust the washing or drying process according to data read by the identification device.
