Abstract (en)

[origin: EP1225289A2] The lock box for a door lock, particularly for an insert lock, has a base to which a cover (3) is held by means of several screws and/or rivets. Between the cover and a base wall spaced apart from it a box inner space is formed for accommodation of the functional components of the lock and is closed on the periphery of the box by a peripheral wall of the box base. The cover is additionally held by engagement on the box base. On the edge of the cover, first securing components (14,15) are provided, which when the cover is placed on the box base engage with second such components provided on the box base. The first or second securing components are nose formations and the second or the first of them is formed by at least one securing or locking aperture with securing surfaces which work in conjunction with the nose formations.
