Abstract (en)

[origin: EP1225396A2] Device for actuating valves (10) for shutting off the supply (21) of heating elements (22), comprising a container (101) which has arranged, inside it, at least one wheel (102) which is connected to the element for operating the valve (10) and which can be actuated rotationally by means of a motor (104) controlled by an associated circuitry (104a), at least one receiving element (106) able to receive a signal emitted by a transmitter outside the device and send it to the control circuitry (104a) of the motor (104), at least one independent power source (107) being provided for supplying power to the motor and the electrical circuits. <IMAGE>
