Abstract (en)

[origin: WO0128567A2] A method for preventing or minimizing loss of bone mineral in mammals which method comprises administering to a mammal an amount of an aminoalkylenephosphonate which is effective to prevent or minimize loss of bone mineral density. The aminoalkylenephosphonates of the present invention should have at least one R-N(Alk-PO₃H₂)₂ group or at least two RR'N-Alk-PO₃H₂ groups wherein R and R' can be, same or different, aliphatic or cyclic moiety, and Alk is an alkylene group having from 1 to 4 carbon atoms.
