Abstract (en)

[origin: WO0125271A2] Disclosed herein are methods for treating tumors which express or over-express the tumor associated antigen (TAA) fibroblast growth factor 5 (FGF-5), including renal cell carcinoma (RCC) and carcinoma of the prostate and breast. Methods include modulating an immune response, such as increasing an immune response, or modulating FGF-5 expression or activity. The disclosure also includes methods of determining if a subject has an enhanced susceptibility to a disease associated with abnormal FGF-5 expression.
