Abstract (en)
[origin: WO0132490A1] The invention relates to a bogie for rail vehicles that is especially useful for high wheel loads. The cross-bar (8) of said bogie is supported by the two wheel-set axles (6, 7) on which the wheels (2-5) are rotatably mounted by means of two springs. The wheel sets are guided by guide leaves (15, 16) in the longitudinal and the lateral direction and/or by articulated rods (11-14) that are preferably mounted in the direction of the rails.
