Abstract (en)
[origin: WO0138351A2] The present invention is based on the sequencing and assembly of the WSBV genome. The present invention provides the complete primary nucleotide sequence of the WSBV genome in a series of genomic and predicted transcript sequences. This information is provided in the form of sequences, annotation information, and computer-based systems, and can be used to generate antiviral agents and nucleic acid and protein-based viral detection reagents and kits such as nucleic acid arrays.
