Abstract (en)
[origin: WO0133149A1] A refrigerated container control system has sensing means such as a temperature sensor mounted within a refrigerated container interior (10). A controller (4) associated with refrigeration plant (6, 7, 8, 9) has a short-range radio transceiver to transmit sensed information to a remote operator panel (3) mounted in a cab of a vehicle on which the container is mounted. A driver within the vehicle cab can send control signals to the refrigeration plant via a short-range radio transceiver in the remote operator panel (3) to remotely regulate operation of the refrigeration plant from the cab of the vehicle.
