Abstract (en)
[origin: WO0133363A2] The invention relates to a data processing device for transmitting, receiving, processing and storing of data, comprising at least one central unit (1a...1c), at least one send and receive unit (2) and a first and a second memory unit (3a, 3b). The at least one central unit (1a...1c) and the send and receive unit (2) are users of the memory units (3a...3b), whereby an access device (4) is arranged with each memory unit, to control the random, simultaneous access of the two users (1a...1c, 2), such that a simultaneous access to both memory devices is possible.
