Abstract (en)  
[origin: DE19952179A1] The invention relates to an electric safety switch device comprising a housing (12) consisting of insulating material and having receiving pockets (2). Fixing noses (3) of at least one auxiliary block (4) can snap in said noses. The inventive device also comprises at least one tripping device and a support (5) for components. The support is used for various contact and connection components that can be pre-assembled on said support (5). The aim of the invention is to provide a safety switch device that can also be used for auxiliary blocks pertaining to another range of appliances. The aim of the invention is also to easily assemble the individual components. The support (5) for components can be fixed in a switchgear housing as a completely pre-assembled unit. The receiving pockets (2) are arranged on the support (5) for components.
