Abstract (en)

[origin: WO0133734A1] The present invention relates to bugging-device detecting apparatus and method being able to detect not only a bugging device which always operates but also a VOX-type bugging device which operates only when there is sound. This detecting method acquires a frequency spectrum of detected wireless signals within target frequency band, outputs a voice sound, re-acquires a frequency spectrum of wireless signals while the voice sound is being outputted, compares the two spectrums to know whether the two spectrums are the same, and determines whether a hidden listening device is operative around based on the comparison result.
