Abstract (en)
[origin: EP1226849A2] A safety device, particularly usable in ski bindings including a lever-equipped button that is selectively and rotatably associated with a central body, constituted by a lever that has a first end, which is pivoted to the button, and a second free end, which interacts, by abutment, with at least one locator provided in the central body. The lever thus arranged acts as a device for the temporary locking of the rotation of the button. <IMAGE>
