Abstract (en)

[origin: EP1226970A2] An ink jet recording element comprising a support having thereon a porous image-receiving layer comprising: (a) particles having a primary particle size of from 7 to 40 nm in diameter which may be aggregated up to 300 nm; and (b) water insoluble, cationic, polymeric particles comprising at least 20 mole percent of a cationic mordant moiety. and an ink jet printing method, comprising the steps of: a) providing an ink jet printer that is responsive to digital data signals; b) loading the printer with the ink jet recording element described above; c) loading said printer with an ink jet ink composition; d) printing on said image-receiving laser using said ink jet composition in response to said digital data signals.
