Abstract (en)

[origin: EP1227235A1] A method for controlling torque aberrations of an engine, wherein said engine comprises at least one actuator for controlling engine management, generally comprises the steps of a) recording rotating speed data of said engine, b) processing said rotating speed data for detecting a variation of rotating speed of said engine and calculating an actual rotating speed variation, c) determining an actuator correction value from said actual rotating speed variation, and d) feeding said actuator correction value into an actuator controller of said actuator.
