Abstract (en)

Drying method and device for textile material in the form of strip (11), or hides, wherein the strip (11) or hide is made to pass inside a closed chamber (12) inside which an environment is created in depression with respect to the atmospheric pressure. The strip (11) or hide passing through the depression chamber (12) is subjected to a heat treatment in order to take the water contained in the strip (11) to a temperature at least near to that of boiling. The heat treatment is associated with at least a mechanical treatment to remove the water and humidity present on the strip (11) or hide. <IMAGE>
