Abstract (en)

In order to minimize loss of a packaging area on a main surface of a substrate, a card connector (1) comprises a card connection part detachably storing a card (500), a leg part (101) provided to hold the said card connection part on a position separated from a main surface of a substrate (700) and have a clearance between the said card connection part and the said main surface in a region defined by projecting the said card connection part on the said main surface and a terminal part (200) for electrically connecting the said card (500) to a connected terminal provided on the said substrate (700). The said card connection part includes a card storage part (300) and a base part (100), and the said card storage part (300) is rotatably fixed to the said base part (100). <IMAGE>
