Abstract (en)
[origin: WO0134180A2] The invention describes for the first time the successful clinical application of interferon gamma (IFN- gamma) in human bronchial asthma therapy. The clinical data show unambiguously that continuous application of IFN- gamma in relatively low doses can be successfully used for long-term treatment of severe asthma bronchiale, especially for glucocorticoid-resistant asthma. The invention relates also to a combination therapy administering IFN- gamma and glucocorticoids, which alone are not or not sufficiently effective in asthma therapy.
