Abstract (en)  
[origin: DE10047616A1] A reusable knock down stillage box (110) comprises a base pallet assembly (12A) including a rectangular base panel (14A) and four side walls (20, 22, 24, 26) extending from the base panel (14A), and a top panel (44A). Each of the side walls (20, 22, 24, 26) comprise lower (28A, 28A, 34A, 40A) and upper side wall panels (29A, 30A, 36A, 136), with three of the lower side wall panels (27A, 28A, 34A) being hinged to three of the upper side wall panels (29A, 30A, 36A), and the lower side wall panels (27A, 28A, 34A) in turn being connected to the base panel (14A) by means of L-shaped clips (46A). The upper (44A) or side wall panels (20, 22, 24, 26) are movable between an erected cargo stowing position in which stillage components (111) are erected for stowing cargo such as motor vehicle panels within the box (110) and a collapsed stillage stowing position. In the collapsed position, the top panel (44A) and the upper side wall panels (29A, 30A, 36A, 136), in combination with the base panel (14A) and the lower side wall panels (27A, 28A, 34A, 40A), provide a sub-box defining a closed sub-volume within which the stillage components (111) are stowable in the collapsed condition. The stillage components (111) and the clips (46A) associated with a particular box (110) are thus conveniently housed within the sub-volume of that box when the knocked down boxes (110) are shipped back to their cargo loading destination.
