Abstract (en)

[origin: WO0130414A2] A display system for anesthesia monitoring comprising a low form factor display unit and a grouping of controls to provide increased functionality. The grouping provides access through a Dedicated group to functions of an immediate nature such as controlling audible alarms and declaring events. The grouping also provides a Menu/Navigation set of controls. A context group allows the Menu Navigation controls to be used differently depending on the mode the system is operating in. The display color codes different parameters shown on the display and inverts the burst suppression trend line so as to provide a more intuitive representation of how deeply anesthetized the patient is.

[origin: WO0130414A2] A display system for anesthesia monitoring comprising a low form factor display unit (10) and a grouping of controls to provide increased functionality. The grouping provides access through a Dedicated group (16) to functions of an immediate nature such as controlling audible alarms and declaring events. The grouping also provides a Menu/Navigation set of controls (14). A context group (18) allows the Menu Navigation controls to be used differently depending on the mode the system is operating in. The display color codes different parameters shown on the display and inverts the burst suppression trend line so as to provide a more intuitive representation of how deeply anesthetized the patient is.
