Abstract (en)

Support device that, when inserted in a shelf, enables the latter to be inserted in and secured to the walls of a furniture piece such as a cabinet or the like, in a rapid and automatic manner. The device comprises a case (10) that is inserted in the border of the shelf (13) and that holds a pin (11) loaded by a spring (12). The pin (11) is provided with two pairs of relieves (21, 22) which are adapted to cooperate with elastic tangs (23) projecting into the case. The pin (11) can take two stable positions, ie. a position in which it is fully inserted in the case (10) and a position in which it protrudes to enable the shelf to be joined to the wall of the cabinet. Moreover, the pin is adapted to take an intermediate unstable position between said two stable ones. <IMAGE>
