Abstract (en)

[origin: EP1228840A1] The tool assembly, to work the side edges of skis, has a ski holder (22) with two parallel holders (23) each to take a ski (24). The grinders (18) are on sliding lateral slides (6), moved independently by setting slides (11) in the setting direction. The guides (10) are in a movable frame which can be shifted across the advance/setting direction (30). The grinding disks are pot disks (21) which can be set at the end side to project over the grinders across the setting/advance direction by the thickness of the pot wall. A monitor registers the ski edges for the setting of the lateral slides.
