Abstract (en)
[origin: DE10104353C1] The toy vehicle has a seat (5) providing a seating surface for the child and a pair of track bands (4) positioned on either side of the seat, which are passed around freely rotating rollers (3), and pressed into driving engagement with the floor surface by the weight of the child on the seating surface. The outer surfaces of the track bands may be structured for increasing the friction between the track bands and the floor surface.
