Abstract (en)
[origin: EP1229604A2] The unit has a circuit board with components, an antenna with a flat first end connected to the board and a second end spatially separate from it and a connecting element connected to the antenna via a first contact surface and to the circuit board via a second contact surface. The projection of the center of gravity of the antenna onto the board is within an area defined by the second contact area and the flat end of the antenna. The unit has a circuit board (10) with components (12), an antenna (1) with a flat first end connected to the board and a second end spatially separate from the board and a connecting element (9) between antenna and board, whereby the connecting element is connected to the antenna via a first contact surface and to the circuit board via a second contact surface. The projection of the center of gravity of the antenna onto the board is within an area defined by the second contact area and the flat end of the antenna.
