Abstract (en)

[origin: WO0143612A1] The invention concerns a flexible bag (1) to supply soap, provided with integral measure valve (7) and a cabinet container (10) and supplier for the bag. The body of the bag is made of a flexible material formed with two planar elements (2A, 2B), a tubular device made of an elastic material with an outlet for the exiting of the soap. The bag is provided with many orifices (12) both superior and inferior distributed in the body of the bag. The invention includes also a cabinet consisting of a cover (15) and a base (11), and many fix hooks (11A) distributed in the base of the container, which coincide with the orifices of the bag, in order to locate the bag on the base, as the hooks are inserted in the orifices. A guide with a groove (27) is provided to make easier the insertion of the bag outlet.
