Abstract (en)

[origin: WO0135808A1] The invention concerns a vacuum cleaner bag comprising a rigid plate (3) having a first opening (4) for the passage of sucked air, a locking window (5) for receiving a locking member (6) pertaining to the fixing device integral with the vacuum cleaner housing, and a closure plate (7) mounted sliding on the rigid plate (3) and provided with a second opening (8), such that in a retracted position, the closure plate (7) closes the first opening (4). The invention is characterised in that the locking window (5) can receive the locking member (6) in the retracted position, while, in its functional position, the closure plate (7) closes the locking window (5), so that the locking member (6) is released from the window (5).
