Abstract (en)

[origin: WO0135904A1] The invention relates to a cosmetic sunscreen preparation, which is provided in the form of a foaming oil-in-water emulsion inside a foam dispenser, whereby the oil-in-water emulsion, with regard to the total composition, comprises 2-50 wt. % of an oil phase and 50-98 wt. % of a water phase that contains a surfactant. In addition, the oil phase and/or the water phase of the emulsion contain(s), with regard to the total composition, UV-A and/or UV-B absorbers in a quantity of 1-40 wt. % of which the oil phase contains 1-30 wt. % and the aqueous phase contains 0-10 wt. % of the UV absorbers. The oil-in-water emulsion also optionally contains a designated quantity of cosmetic auxiliary agents, especially preservatives and/or perfumes and/or agents used for increasing the resistance to water.
