Abstract (en)

[origin: WO0115745A1] This invention discloses a method and formula for treating cancer patients through the suppression of mobilization and adhesion of cancer cells, promotion of tumor suppression and remission and repression of infectious micro-organisms. Administration is by oral ingestion or injection or intravenous drug drip. The invention employs control of extracellular and intracellular ionic physiology by administering alkaline salts, altering systemic, localized and/or cellular ionic physiology. The expedient method deprives cancerous cells of their acidotic environment to facilitate aerobic environment, optimizes bio-electric repair potential and pain reduction, promotes cellular assimilation of the alkaline salts and neutralizing a variety of acidic toxins from the biological system. Further, the method has highly effective anti-viral, anti-bacterial and anti-metastatic activity.
