Abstract (en)
[origin: WO0136011A1] Auto-adhesive compositions are made of specific blends of low protein natural rubber latex in combination with at least one polymer. Proportions of these components may vary according to the requirements of the specific end products but in order to achieve the desired results of the present invention, at least 90.0 percent by weight of the low protein natural rubber latex and at least 1.0 percent by weight of the polymer are necessary in the adhesive. The low protein natural rubber latex can be present from 90.0 to 97.0 percent by weight and the polymer can be present from 3.0 to 10.0 percent by weight.
