Abstract (en)  
[origin: WO0170681A1] The invention relates to articles having an activated surface for immobilizing bioorganic macromolecules. Said articles comprise: a substrate with a surface; a dendritic skeleton linked to the substrate surface, and; a number of first coupling groups linked to the dendritic skeleton for immobilizing bioorganic macromolecules. The articles can be produced using a method comprising the following steps: providing a substrate with a surface; linking the substrate surface to a dendritic skeleton, and; furnishing the dendritic skeleton with a number of first coupling groups for immobilizing bioorganic macromolecules.
