Abstract (en)
[origin: WO0219359A1] The invention relates to a device for actuating mobile surfaces on motor vehicles, by means of servo-drives. To predetermine the position of the mobile surface, said device is provided with a desired-value generator (12) and evaluation electronics (1) for evaluating the signals (13) of the desired-value generator (12), said generator and evaluation electronics being interconnected via an interface (10, 11). The desired-value generator (12) is configured as a digital switch, which supplies, in each detent position (15, 16), a digital bit pattern (14) corresponding to the detent position (16).
