Abstract (en)

[origin: US2002104400A1] The actuating device for a hood should be designed in such a way that an actuation from the outside for misuse is not possible. For this purpose, the actuating device is equipped with a handle, in which a locking sensing device and a catch element, which is connected with a Bowden cable, are arranged. By pressing the locking sensing device in the direction of the catch element is created a rigid connection between the locking sensing device and the catch element. For this purpose, the actuating sensing device is equipped with a catch nose and the catch element with a catch recess.
