Abstract (en)
[origin: EP1231344A1] Cover rail (1) has an opening (8) for the fitted lock bolt (9) of the movable door and the corner bolt (7) drive bar (5) is well spaced (A) from the cover rail by using cranked bar parts (11-13). The drive bar is closed off at the opening (8) by a cover plate (14) as held to the door by screws (15) run through rail (1) holes (16) and bar slots (17). The cranked part (12) of the bar (5) is guided along the groove (2) bottom. The rim bolt (7) is in round form and is welded to the bar (5) and when the bolt is retracted the angle lever projects at an angle from the rail (1) so that the closing door strikes the lever and so forcibly re-sets it.
