Abstract (en)
[origin: EP2281988A1] The deflection element has a cover rail section (23) and a coupling part (22) for a movement-transmission element of an angular guide element at both sidepieces of an angular deflection part. A lever-locking device is provided at one of the sidepieces. A sliding section protrudes into a movement path of the coupling part guided at the cover rail section. The sliding section is squeezed out by the coupling part from the movement path. The lever-locking device has a lever (50) with an arm with a latch head (20) protruding through a window (32).
