Abstract (en)

[origin: EP1231572A2] A sensor (6) for detecting changes in position links to an electric clock (4) so that a parking time mode is activated if the sensor detects no change of position for a preset time interval. The sensor and the clock connect via a microcontroller (7) controlling the functions of the parking disk. The sensor acts an acceleration sensor and the parking time mode is activated if no acceleration for the preset time interval is detected.
