Abstract (en)
[origin: EP1231587A2] Device for securing an information sign (1) onto a vertical surface of a wall (6), door, etc. comprises a U-shaped profile strip having at least two separate profile pieces (10) held with their longer arms (9) a distance apart on at least one support plate (2) fixed to the vertical surface. The longer arm of at least one profile piece is joined to the support plate so that it moves in the direction of the other profile piece and is locked onto the support plate in a pre-determined holding position via a releasable locking lug (16). The information sign is locked against movement in the holding position of the locking lug. Preferred Features: The support plate made of elastic material has a flexible tongue (17) for holding the locking lug. The tongue has a wedge surface (18) externally operated by a tool.
