Abstract (en)
[origin: WO0075037A1] The invention relates to a blister pack (1) with a base part (2) with at least one depression (3) that is surrounded by a shoulder, the entirety of shoulders forming a contiguous surface. A cover film (5) is sealed onto the base part (2) and covers the openings (4) of the depressions. The base part (2) is provided with means (9) that facilitate the opening of the pack. Said means are configured as one or more flat parts that are defined by separating lines (7), preferably in the form of indentations (10). Said indentations can be bent along the separating lines (7) at least partially outwards from the base part (2) and are characterized by at least one edge or tip so that, with the help of the bent flat part (10), the cover film (5) positioned above the opening (4) of the depression can be undone, perforated, broken or weakened to such an extent that the product contained therein can be forced through the depression (3) by hand.
