Abstract (en)

[origin: WO0138502A2] This invention relates to an isolated nucleic acid fragment encoding an oleoyl-ACP thioesterase. The invention also relates to the construction of a chimeric gene encoding all or a portion of the oleoyl-ACP thioesterase, in sense or antisense orientation, wherein expression of the chimeric gene results in production of altered levels of the oleoyl-ACP thioesterase in a transformed host cell.
