Abstract (en)
[origin: DE19955405C1] The temperature regulation device uses a temperature sensor (8) contained within a sleeve (2) containing the feed lines for the underfloor heating conductors (7), which is positioned above the floor surface, providing a signal used for on-off switching of the current for the heating conductors. At least one of the heating conductor feed lines is used over at least part of its length as an additional heating conductor (5).
