Abstract (en)

[origin: WO0235172A1] The invention relates to a magazine safety catch for an automatic pistol, comprising an inserted magazine (8) having magazine lips, and a pivoting lever (2) which is held by a spring (1) in the movement path of a rod (5) coupled to a trigger (6), said lever engaging with said rod in a restraining manner. The pivoting lever then disengages from the rod (5) in a pivoting manner by engaging with a part (10) of the magazine (8) when the same is in its operating position, said part of the magazine (8) being the upper edge (10) thereof so that the pivoting lever (2) can be arranged very high up in the hilt. Said pivoting lever can thus also be fitted in an automatic pistol having a non-detachable hilt part. Furthermore, the magazine can be produced virtually without any additional formation.
