Abstract (en)
[origin: WO0137153A1] A system for conducting on-line auctions of products is. The system includes a database server (10) disclosed for storing and providing on demand, information pertaining to a number of products to be auctioned, the database server system is for receiving a number of bids on a product of the plurality of products when the product is auctioned, the number of bids received is for determining a quantity of the product auctioned. The system also includes a plurality of user clients where each is operable by a specific user and each is for establishing the communication with the database server system, each of the number of user clients is for receiving from the database server system information pertaining to the product auctioned and for relaying to the database server system a bid on the product auctioned.
