Abstract (en)
[origin: US7021648B2] A board for gliding for downhill skiing, having, at least in its underfoot zone: a lower gliding surface composed of a sole plate bordered by metal edges; a topsheet substantially parallel to the lower gliding surface, on either side of the center longitudinal plane of the board; lateral reinforcement elements located in line with at least one part of the bead of the metal edges; lateral faces extending between the top part of the lateral reinforcement elements and the topsheet, said lateral faces having recesses located below the plane of the topsheet and opening out in the latter; wherein these recesses form a hollowed zone connected to the reinforcement elements, and wherein the lower part of the recesses has a slope that is inclined longitudinally relative to the lower gliding surface and the topsheet.
