Abstract (en)

[origin: US2002113411A1] A raising platform for a binding for a board for gliding over snow, including a planar central zone capable of receiving the front stop and the heel piece of the binding, and two lateral portions of which the lower edge is intended for interacting with the board for gliding, wherein the lower edge of the lateral portions has, in a longitudinal plane, a certain gradient relative to the plane of the central zone.
