Abstract (en)
[origin: WO02059016A1] The invention relates to a needle packaging (1), especially for packing needles (N), comprising a holding-down clamp (23) arranged in the inner space (I) thereof and used to fix the needles (N) in said inner space (I). The holding-down clamp (23) is formed, for example, by at least two spring elements such as clamping lips (24, 25) which extend transversally in relation to the needles (N) through the inner space (I). Said clamping lips (24, 25) are arranged on the inner side of a section of the packaging (1), which is moved in the direction of the needles (N) after the packaging has been positioned, in such a way that the clamping lips (24, 25) lie on the needles (N). Said section can, for example, be formed by a covering section (12) which is positioned on the receiver area (3) of the packaging (1) in a pivotable manner. Said packaging enables an especially simple positioning and is suitable for various types of needle.
