Abstract (en)
[origin: EP1233118A2] The facade cladding (1), for a building, has a support structure (2) secured to the building wall (3). The facade is fitted with inner rectangular cassettes (7) against the support structure, with folds (12) along their longitudinal sides (11) and cut-back profiles. Rectangular cladding cassettes (16) are clipped to the inner cassettes, with their longitudinal sides gripping around them in a force fit. Clamping bars are at the longitudinal sides (15) of the cladding cassettes, to fit into the cut-back profiles and lock the cladding in position.
