Abstract (en)

[origin: EP1233130A2] The device for covering revision apertures in ceilings or walls comprises an installable, rectangular outer frame (1) with an inner frame forming a revision flap pivotally connected to it on one side. A closure device comprises at least one snap unit (8,16), next to which is a shear (10). The shear is displaced through 90 degrees in relation to the snap unit.
