Abstract (en)
[origin: EP1233223A2] A pipe (1) for pressurized fluid, in particular an automotive intercooler pipe, having at least one flexible portion (2) in the form of a bellows sleeve (3) formed in one piece with and of the same material as the rest of the pipe; a number of radial undulations (4) of the sleeve project with respect to an outer lateral surface (5) of the pipe, and are so shaped as to always project with respect to the outer lateral surface of the pipe at any angular portion of the flexible portion; and at least some of the undulations have at least two shallow angular portions (6), which still project with respect to the outer lateral surface of the pipe, and which are all aligned to form two shallow longitudinal portions (7) axially reinforcing the sleeve. <IMAGE>
