Abstract (en)  
[origin: WO0139936A1] In a razor having at least one electrical motor arranged in a housing and a cutting head, in addition to an adjustably disposed long hair cutting system or trimmer and an actuating switch (2), said actuating switch is mechanically coupled to the trimmer (5) so as to move in the same direction and the trimmer (5) can be moved from a first resiliently mounted operating position to a second further extended position. A part (11) of the trimmer (5) serving as skin protecting element (11) is entrained in the direction of displacement up to a limit stop (15) along a displacement path that is shorter than that of the trimmer (5).
