Abstract (en)
[origin: WO0140599A1] The inventive frame structural system contains frame elements for constructing an enclosure, whereby the frame elements comprise at least one corner profile (1) with a corner insulation element (3), an intermediate connector element profile (25), and a frame profile (2, 2A, 2B, 2C). A connected insulation layer (3, 4, 4A, 4B) is arranged between the interior and the exterior of the enclosure. A frame structural system of this type enables the assembly of a diverse range of appliances, which can be both thermally insulated and mechanically isolated.
