Abstract (en)

[origin: WO0138854A1] An analytical device that can be used to conveniently and accurately assay plural vessels. In one exemplary embodiment, a pair of LED sources (1) provides illumination through a pair of radial waveguides (30) to plural vessels (40) arranged in a pair of substantially concentric and circular rows about the LED sources. A light pipe (75) receives light transmitted through a vessel from each radial waveguide and reflects the received light downward to a single printed circuit board that contains a photodiode for each light pipe, as well as processing circuitry.
