Abstract (en)

[origin: EP1234667A1] The method involves pressing a section of a transfer area onto a bearer material in an embossing station, whereby the transfer area is fed into the embossing station in the form of a continuous foil strip (11). Fault points (28-30) in the foil strip are detected by a sensor (27) as it is being fed to the embossing station and fault points are fed between two embossing in the station. An Independent claim is also included for a relief printer.
